

## DSC RTCESL 4.5.1 Release Notes

### 1 Overview

These release notes are for the DSP56800EX Real-Time Control Embedded Software Libraries release 4.5.1.

The purpose of this release is to recompile the whole library with the SLLD (64-bit data types support) attribute and the Bit Accurate Models (BAM) of RTCESL functions are added.

## 2 What is new

All libraries are rebuilt with the SLLD attribute to avoid compilation warnings when RTCESL is a part of projects with the SLLD option. Also, the inline functions can be compiled with the SLLD option if the SUPPORT\_64BIT\_DATA\_TYPE define is defined.

The most important functions newly contain their Bit Accurate Models (BAM) for Matlab Simulink environment. Using the BAMs, you can simulate most motor-control applications. After a successful simulation, the Simulink schema can be transferred to the generated code using the Matlab Coder toolbox and the application can be executed from a target board. The DSC RTCESL 4.5.1 installer with the BAMs can be downloaded from the DOWNLOAD section at [www.nxp.com/rtcesl](http://www.nxp.com/rtcesl).

To create your simulation schema, open the BAM (.mdl file from the installation folder; for example c:\nxp\RTCESL\DS\bam; MATLAB 2020a or higher version is required). Connect the block inputs, outputs, and assigned block parameters (if any) and run the simulation.

If you want to transfer your Simulink schemas to the target board, download the model-based design toolbox at: [www.nxp.com/mbdt](http://www.nxp.com/mbdt).

## 3 Description

This release of RTCESL supports the following platforms:

- DSP56800EX

It contains the following libraries:

- MLIB
- GFLIB
- GDFLIB
- GMCLIB
- AMCLIB
- PCLIB

It is compiled on:

- CodeWarrior 11.1 (build 181224)

Optimization used:

- The maximum speed optimization is used for all libraries.

Memory models used:

- SDM - Small Data Model and Large Program Model. To achieve such configuration, uncheck all Large Data Memory Model and Huge Program Model items and check the Large Program Model item in the CodeWarrior Properties window.

- LDM - Large Data and Large Program Model. To achieve such configuration, uncheck all Small Data Memory Model and Huge Program Model Items and check the Large Data Model and Large Program Model items in the CodeWarrior Properties window.

The selected algorithms support the 16-bit and 32-bit fixed-point types only.
