

# Automotive NFC Stack

## AUTO-NFC-STACK

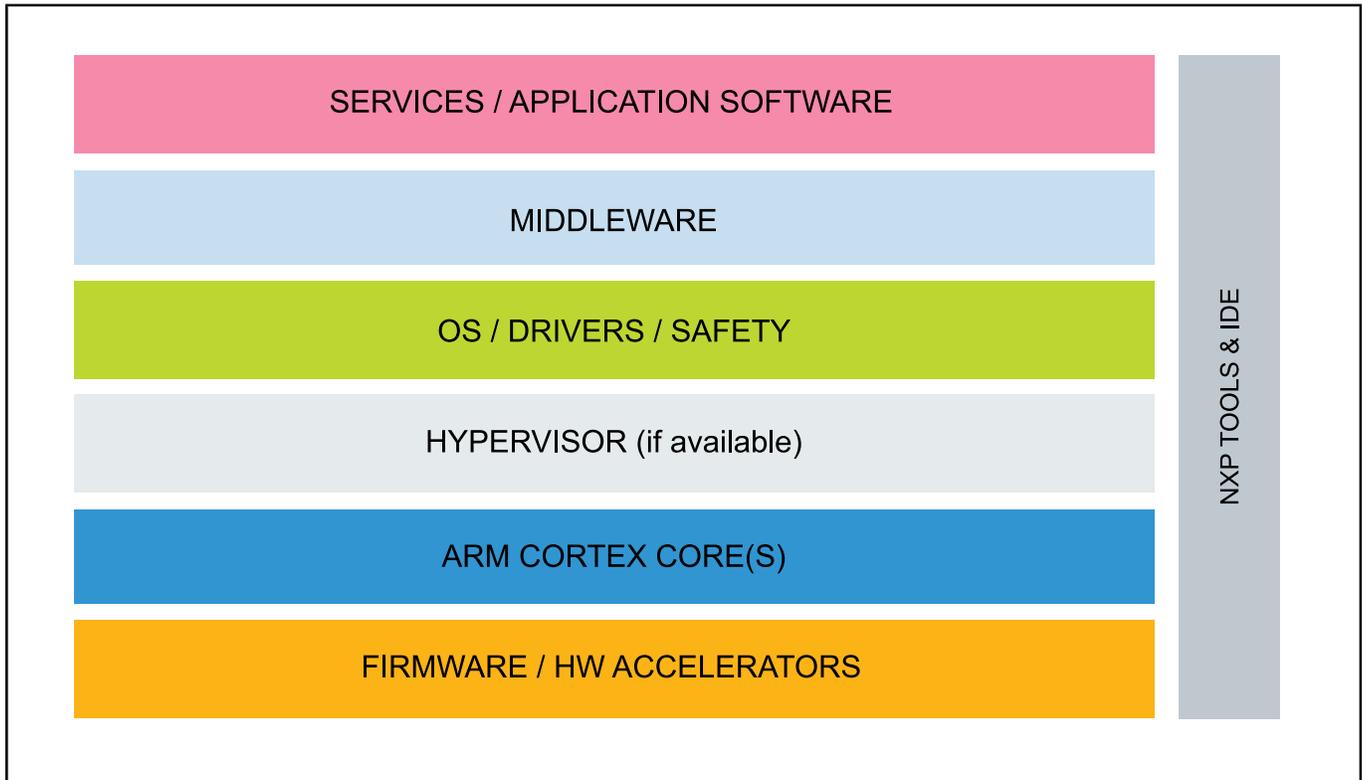

Last Updated: Dec 6, 2024

NFC stack for automotive is a runtime software which implements the NFC protocol stack.

Near-field communication (NFC) is a set of communication protocols that enable two electronic devices, one of which is usually a portable device such as a smartphone, to establish communication by bringing them within 4 cm (1.6 in) of each other.

In the automotive context NFC can be used to exchange data (such as identification credentials) between an external device and the car.
