Last Updated: Mar 21, 2023

The transition to renewable energy sources, electrification of vehicles and the need for resilience in power supplies have been driving a very positive trend for Li-Ion based battery storage systems.

NXP provides complete system solutions for battery management, for which leadership technologies are used for security, functional safety, detection of thermal runaway, cell monitoring, wireless and wired connectivity and microcontrollers in a broad range of performance and feature sets.

NXP's own Transport Protocol Link technology enables modular storage at scalability with practically no limits. MCU free and SW free storage modules can be communicated through SPI, CAN FD or UART to easily scale from a few kWh capacity in residential to MWh for utility scale.

High-accuracy data can be accessed for advanced algorithms for SOC and SOH algorithms as well as optimal power management.
