

FRDM Automotive S32K356 General-Purpose Development Board

FRDM-A-S32K356

Active

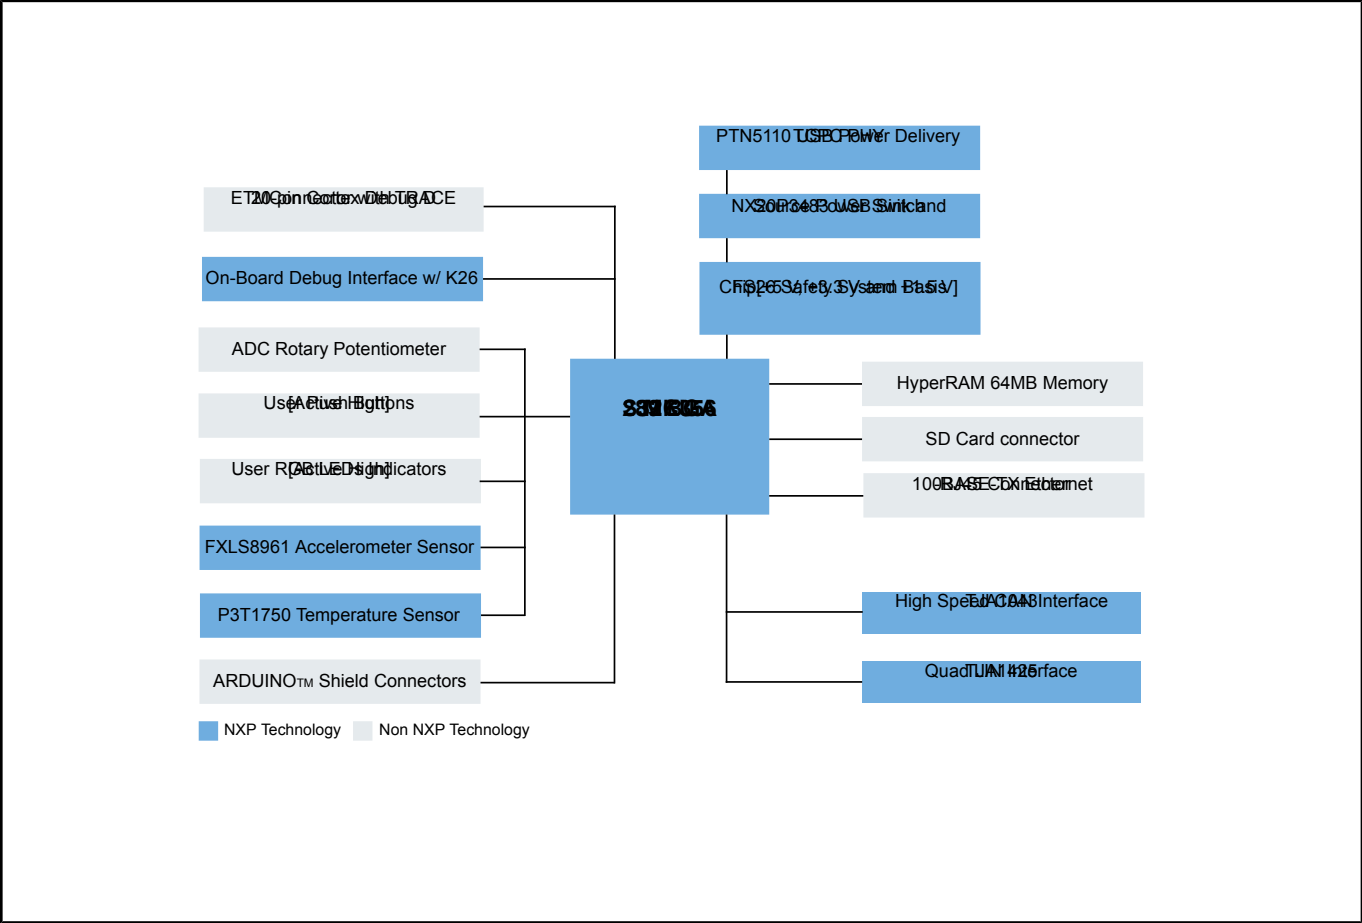

Last Updated: Jun 29, 2026

The FRDM Automotive (A) S32K356 is a development board for general-purpose industrial and automotive applications. Built around the S32K356 microcontroller (MCU) in a compact 289-ball grid array (BGA) package, the [FRDM Automotive S32K3 platform](#) delivers the performance, safety and flexibility needed for next-generation body, zonal control, electrification and mobility applications. It features dual 32-bit Arm® Cortex®-M7 cores operating in lockstep to support ASIL D functional safety, plus an additional Arm Cortex-M7 core running at up to 240 MHz for enhanced processing flexibility.

With up to 6 MB of on-chip Flash, Hardware Security Engine (HSE)-B, over-the-air (OTA) update support, advanced connectivity, an integrated floating-point unit (FPU) and low-power capabilities, the platform supports secure, efficient, and scalable system development.

The FRDM-A-S32K356 offers a standard-based form factor compatible with the Arduino® UNO pin layout, providing a broad range of expansion board options for quick application prototyping and demonstration.
