

S12G Gen4 Lighting

KIT12XS6EVM

Last Updated: Oct 26, 2023

This kit is a control board that allows driving up to 20 separated loads with four integrated smart high-side switches. It can be associated with a large panel of bulbs types thanks to the device configuration and flexibility (incandescent, LED, HID ballast). These four daisy-chained smart power switches are controlled by an S12G MCU associated with the MC33903 System Basis Chip.
