

# SAF85xxL Evaluation Kit with Antenna

## LIP-CKITA

### Preproduction

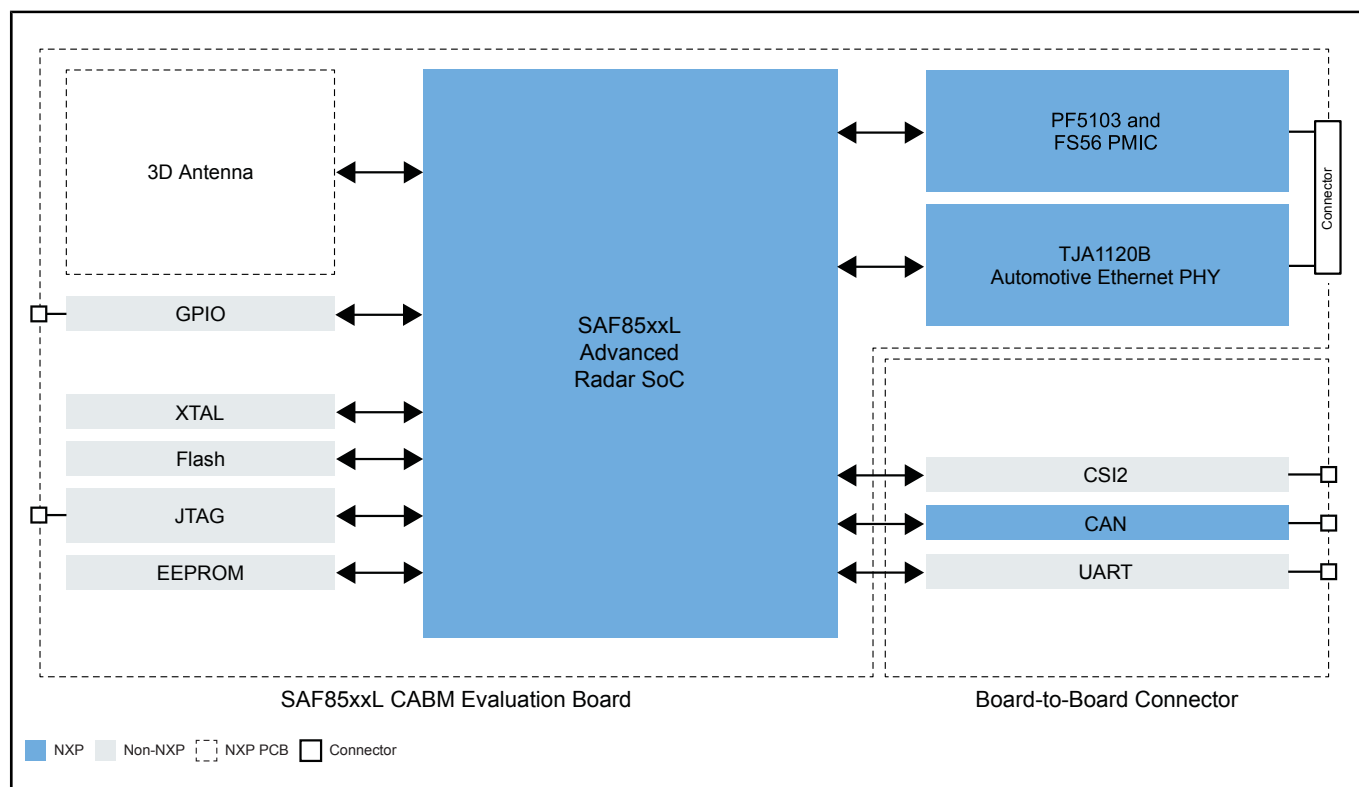

This page contains information on a preproduction product. Specifications and information herein are subject to change without notice. For additional information please contact your sales representative.

Last Updated: Oct 22, 2025

The SAF85xxL evaluation kit (EVK) LIP-CKITA supports the development of 77 GHz radar applications and the evaluation of SAF85xxL one-chip Launcher-in-Package (LIP) radar SoC for automotive applications. This kit allows evaluation of various radar use cases by flexibly configuring the radar chirps and observing the processed output on a PC. Radar software development and evaluation of a comprehensive set of communication and debug interfaces are enabled by the evaluation kit. The EVK consists of a front-end antenna board with an optional slotted waveguide antenna supporting four transmitters and four receivers. This evaluation kit can be used for comprehensive application development as well as RF evaluation.

The LIP-CKITA is available for selected customers with an approved NDA. For additional information, contact support or your local sales representative.
