

32-bit MCU for Automotive ADAS Applications

MPC5561

Not Recommended for New Designs

This page contains information on a product that is not recommended for new designs.

Last Updated: Apr 9, 2022

The NXP® MPC5561 MCU delivers an exceptional combination of high-performance computation and signal processing capabilities for advanced driver assistance systems using radar or image sensors.

- Ensures reliable high-speed communication
- Includes integrated DSP features and upgraded interrupt control
- Integrates more functionality on-chip for greater cost effectiveness
- Supports multiple protocols and customer requirements through intelligent subsystems
- Software and pin compatibility enables the reuse of legacy architectures to protect investments
- Comprehensive development tools simplify and accelerate time-to-market
