

32-bit MCU for Automotive Powertrain and Industrial Applications

MPC5565

Last Updated: Apr 9, 2022

Designed for engine management and high temperature industrial environments, the NXP® MPC5565 embedded controller targets mid-range applications and use cases requiring complex, real-time control.

- Helps increase fuel efficiency and improved emissions
- Offers system performance of up to five times that of its MPC500 predecessors
- Enables easy migration to next-generation 3 MB flash-embedded controllers
- Facilitates reuse of legacy software architectures
- Pin-and code-compatible with other MPC5500 family MCUs
- Includes comprehensive development tools to help simplify and speed system design
