

Absolute Digital Pressure Sensor (20 to 110 kPa)

MPL3115A2

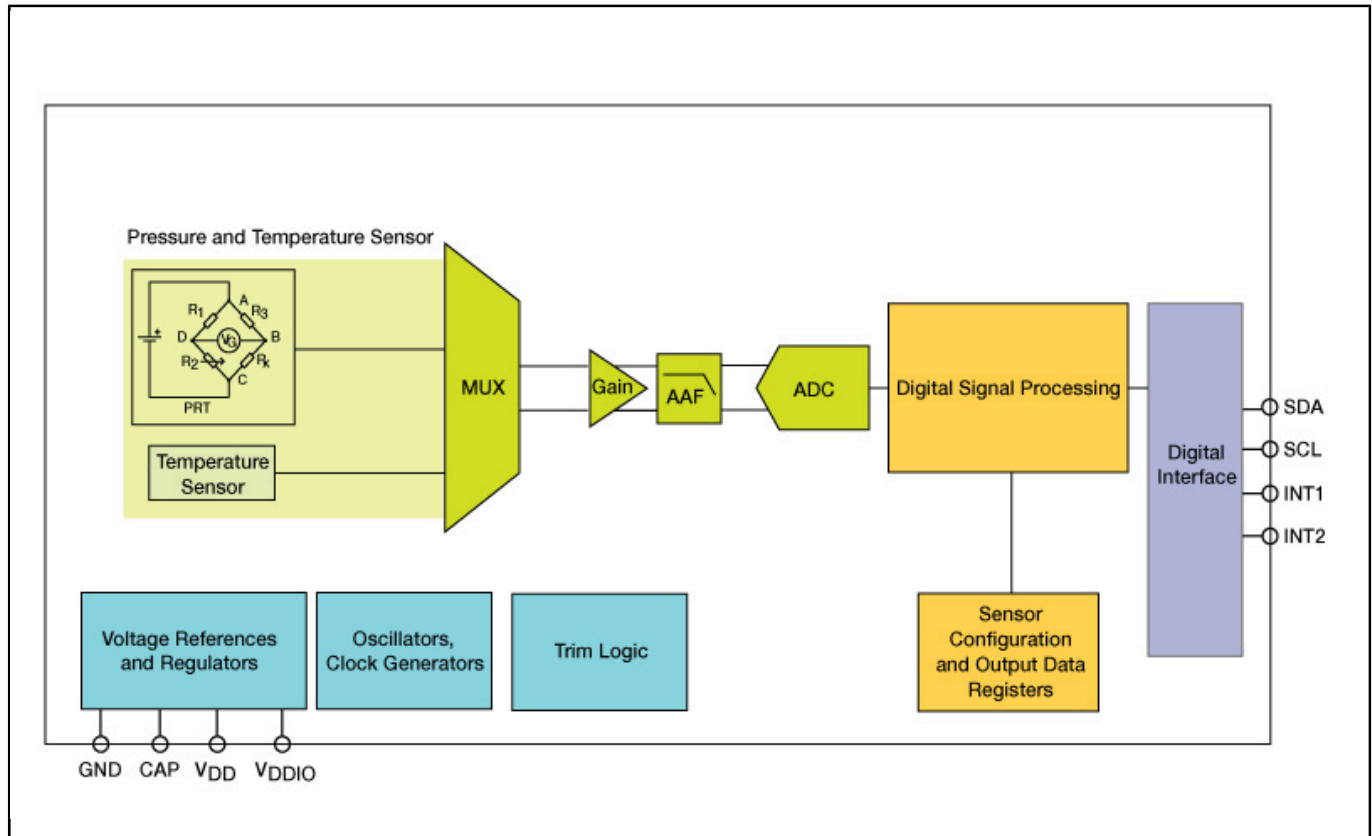

Last Updated: Jun 14, 2024

The MPL3115A2S and MPL3150A2S are the recommended devices for new designs as the MPL3115A2 and MPL3150A2 are discontinued.

The MPL3115A2 is a compact piezoresistive absolute pressure sensor with an I²C interface. MPL3115 has a wide operating range of 20 kPa to 110 kPa, a range that covers all surface elevations on Earth. The fully internally compensated MEMS in conjunction with an embedded high resolution 24-bit equivalent ADC provide accurate pressure [Pascals] /altitude [meters] and temperature [degrees Celsius] data. The internal processing in MPL3115A2 removes compensation and unit conversion load from the system MCU, simplifying system design.

MPL3115A2's advanced ASIC has multiple user programmable modes such as power saving, interrupt and autonomous data acquisition modes, including programmed acquisition cycle timing, and poll-only modes. Typical active supply current is 40 uA per measurement-second for a stable 10 cm output resolution.
