

# SBC and PMIC Product OTP Programming Board

## PMIC-OTP-MB NEW

### Preproduction

This page contains information on a preproduction product. Specifications and information herein are subject to change without notice. For additional information please contact your sales representative.

Last Updated: Jan 23, 2026

The PMIC programming board is designed to work alongside the existing NXP GUI software, offering a streamlined and user-friendly solution for OTP programming of SBC and PMIC devices during evaluation. The kit includes a main motherboard and interchangeable expansion boards equipped with sockets to support a variety of devices. It utilizes IHEX files generated by the NXP GUI to either program uninitialized devices or verify the contents of devices OTP setting against the reference file.
