

# S32N55 Vehicle Super-Integration Processor

## S32N55

### Preproduction

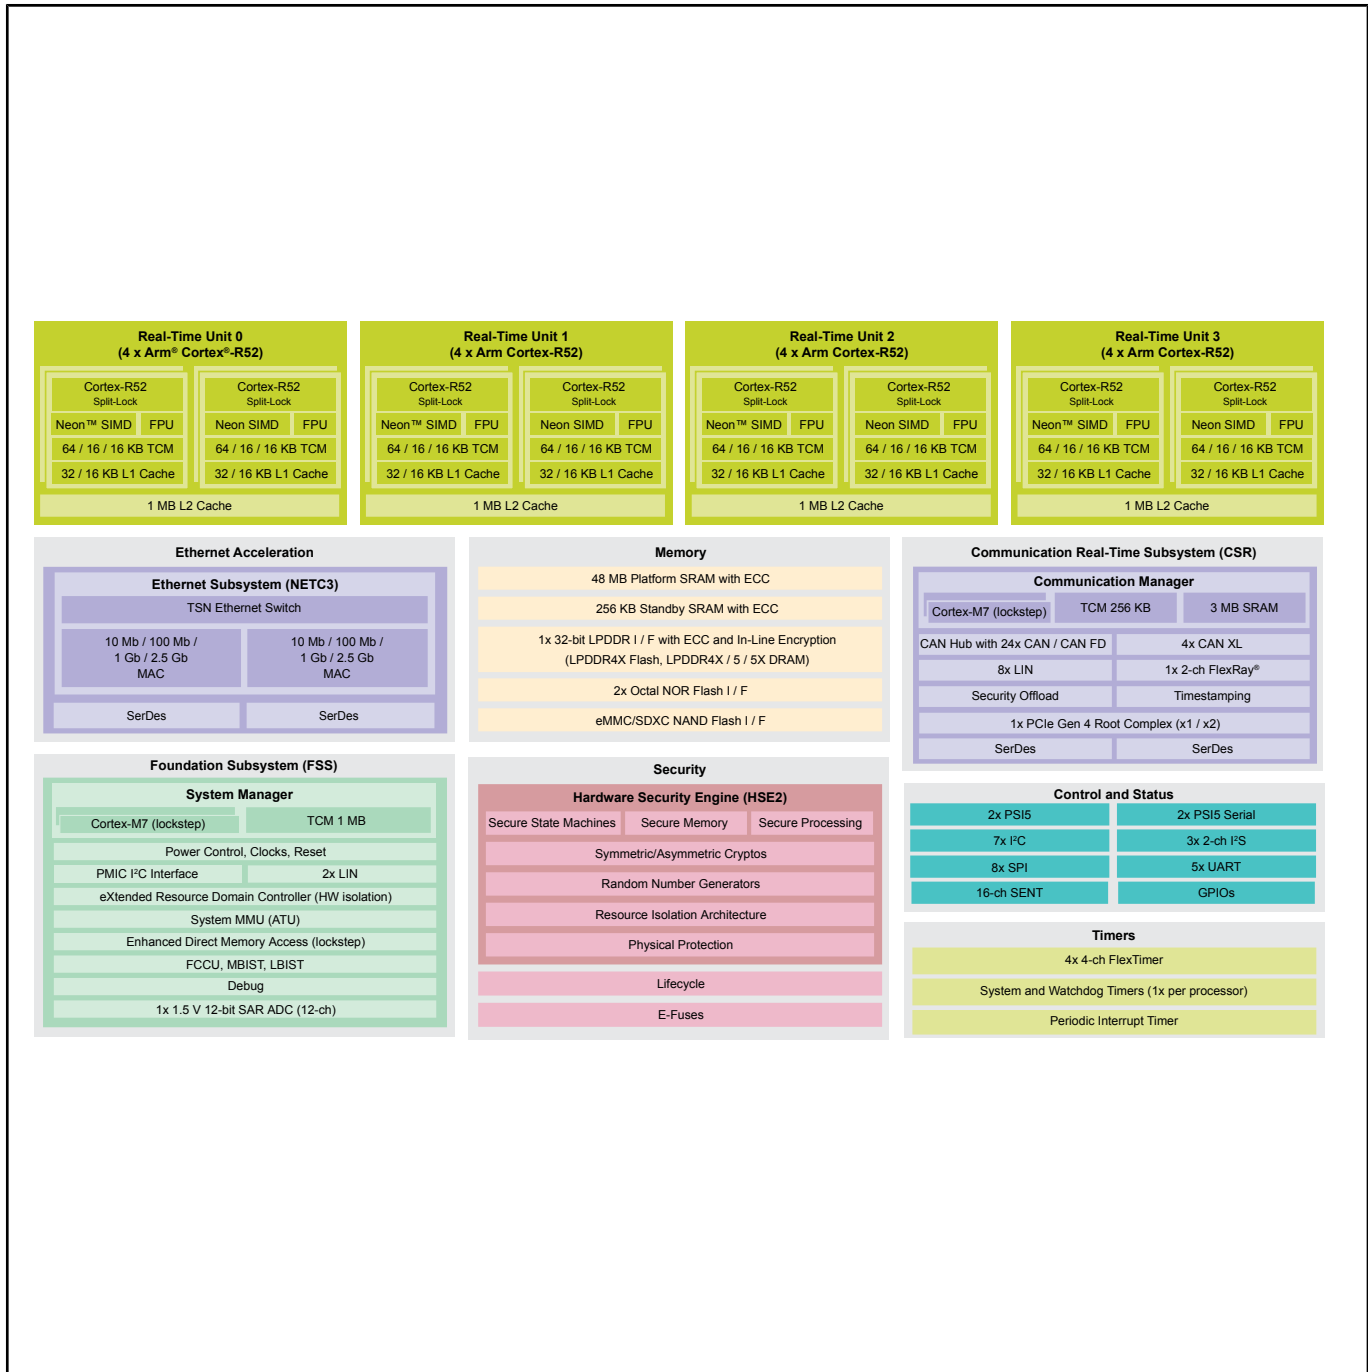

This page contains information on a preproduction product. Specifications and information herein are subject to change without notice. For additional information please contact your sales representative.

Last Updated: Apr 10, 2026

The S32N55 real-time super-integration processor accelerates the development of central vehicle controller applications in software-defined vehicle (SDV) architectures. It safely consolidates real-time vehicle control, management and services into a single system-on-chip solution.

The S32N55 processor combines high-performance real-time processing, a firewalled hardware security engine, an integrated multiport TSN Ethernet switch, extensive automotive communication interfaces and hardware isolation and virtualization for safe and secure integration of real-time vehicle functions.
