

# Radar MCU Evaluation Board

## S32R29-EVB

### Not Recommended for New Designs

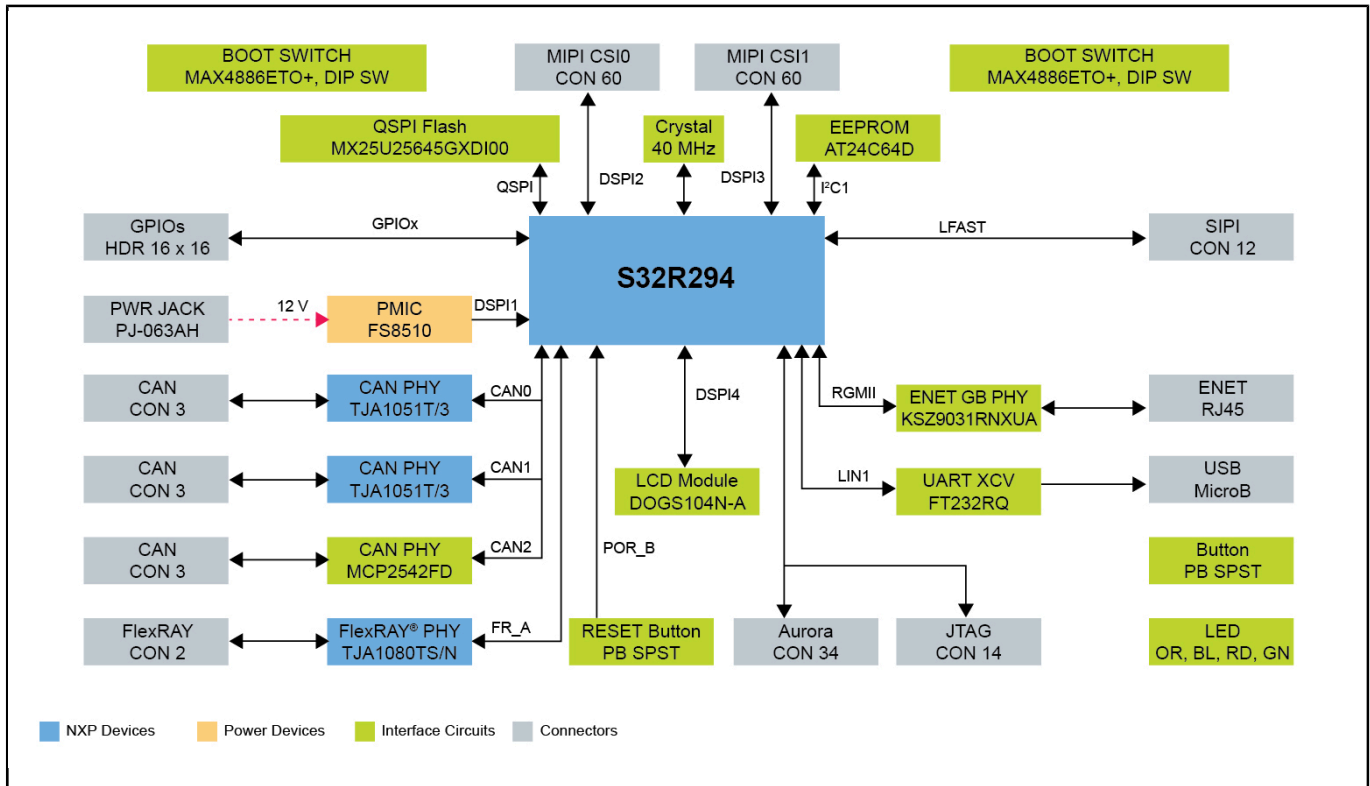

This page contains information on a product that is not recommended for new designs.

Last Updated: Aug 22, 2022

This socketed board is only available for special evaluation, the [Radar Application Development Board \(RADB\)](#) is recommended for new designs.

The S32R29 EVB is an evaluation board for the development of automotive radar applications. The evaluation board gives access to communications interfaces such as Ethernet and CAN, MIPI-CSI2 for connectivity with radar transceivers and GPIO headers to access other MCU functionality. The S32R29 EVB can also be helpful for software development and the evaluation of the signal processing toolkit for radar math acceleration, the functional safety features or the security features of the S32R29 MCU.
