

Transport Ticketing

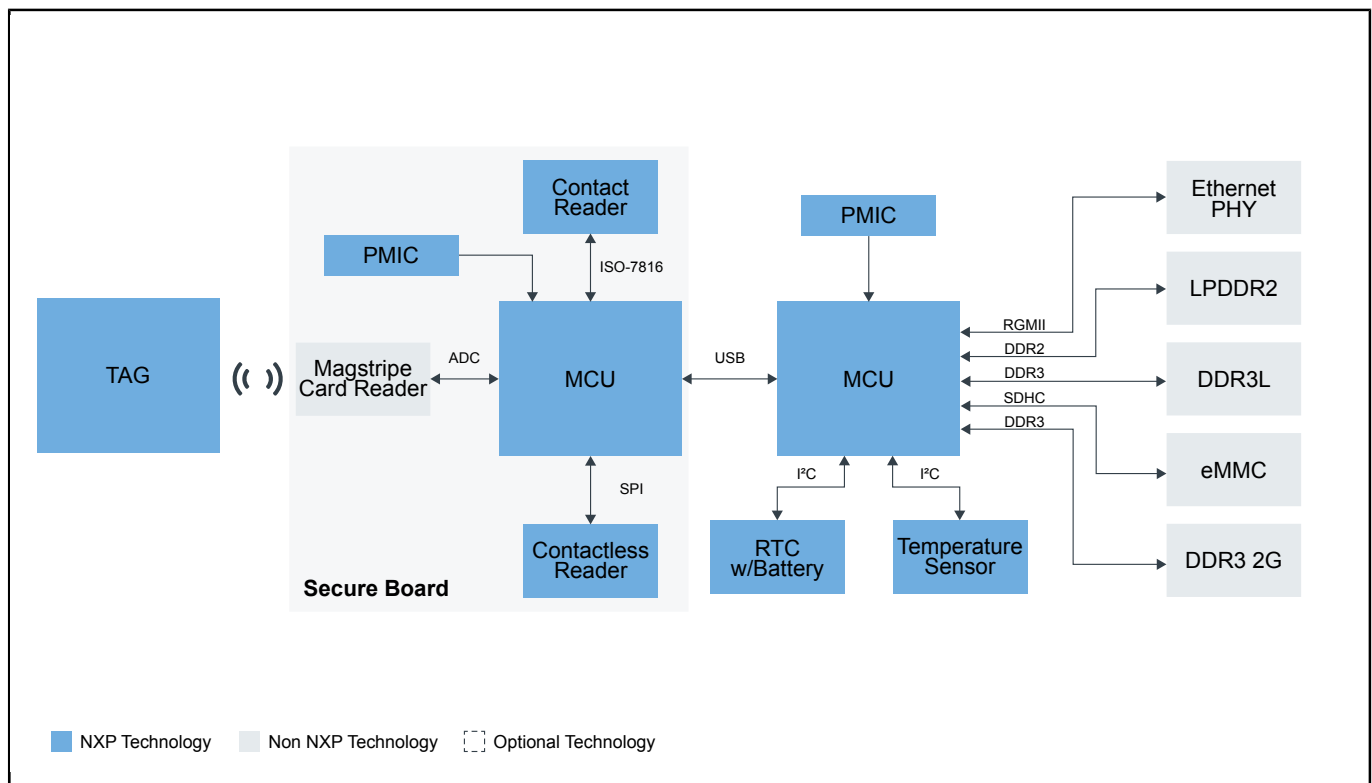

Last Updated: Jan 24, 2022

NXP offers fast and secure solutions for access to, and payment in, public transport. These range from smart cards and ticket ICs to mobile and wearable applications.

Our secure RAIN RFID ICs support hands-free access in public transport, which makes it easier to get around without having to tap a card or ticket to a reader.

Transport barrier systems can validate tickets and also take contactless payment from credit cards and mobile phones. These systems maintain a database of all transactions including a local copy kept in the machine and a copy uploaded to a central database.
