Installation of the MMA955xL CodeWarrior Service Pack

Author: Fengyi Li Application Engineer

1 Overview

The Freescale MMA955xL Xtrinsic family devices are high-precision, intelligent accelerometers built on the Freescale ColdFire v1 platform.

The MMA955xL family's microcontroller core is programmable and configurable with the Eclipse based CodeWarrior for Microcontrollers Development Studio software. CodeWarrior's highly visual and automated Integrated Design Environment (IDE), accelerates the development of custom algorithms and features for complex embedded applications.

This application note provides step-by-step instructions to install the MMA9550 Service Pack for CodeWarrior v10.1. This service pack supports all MMA955xL family devices. System requirements are specified and instructions are given for locating, downloading and installing the patch, and creating a blank MMA9550 project to verify successful installation.

For more information about the Eclipse IDE, read the Eclipse documentation at:

http://www.eclipse.org/documentation/

2 CodeWarrior IDE Requirements

All CodeWarrior IDE products, Basic Suite, Standard Suite and Professional Suite, support MMA955xL devices. Users can also develop their applications on the free download version of CodeWarrior, Special Suite, subject to 1KB C++ code maximum limitation.

The MMA955xL service pack is compatible with CodeWarrior v10.1 and later. Please refer to http://www.freescale.com/codewarrior for system requirements using CodeWarrior IDE.

3 Service Pack Version Naming

The MMA955xL Service Pack naming convention illustrates that this service pack supports CodeWarrior v10.1, and is built for of the MMA955xL family of devices as shown below:

Example: com.freescale.mcu10_1.mma9550.win.v1_0_1.zip

4 Installation

The installation procedure below is to install the MMA9550 Service Pack. Users need to make sure that CodeWarrior v10.1 is already installed.

4.1 Online Mode Installation

Online mode installation is available using the integrated software installation tool instructions provided in CodeWarrior. Access to a reliable internet connection is required.

Steps for Online Installation:

1. Open CodeWarrior MCU IDE and go to Menu > Help > Install New Software.

Figure 1. Begin online installation using the CodeWarrior integrated tool

Note: Installation dialogs may display differently depending on the CodeWarrior version being updated.

- 2. When the Available Software Sites Install dialog is displayed, choose "--All Available Sites--" in the "Work with" pulldown menu.
- 3. From the Available Software dialog, select the checkboxes labeled "CW MCU v10.1 Update", "MCU", "MCU v10.1 Service Pack for MMA9550" and all other preferred items. Leave default settings for boxes as is.
- 4. Click Next.

4.2 Offline Mode Installation

Offline mode installation may be used if access to the Internet is limited or you prefer to download the patch for later installation.

The MMA9550 service pack can be found and downloaded from the Freescale website: http://www.freescale.com/webapp/sps/site/overview.jsp?code=CW_UPDATES_MCU_10_1.

Steps for Offline Installation:

- 1. Download the CW MCU v10.1 MMA9550 Service Pack, Windows or Linux, to your local drive and note the location where the file is saved.
- 2. Open CodeWarrior Development Studio and choose Help > Install New Software.

Note: Installation dialogs may display differently depending on the CodeWarrior version being updated.

Figure 7. Begin offline installation using CodeWarrior integrated tool and local file

- 3. When the Install dialog is displayed, choose Add.
- 4. When the Add Site dialog is displayed, select the Archive button.

- 5. Browse to the location on your local drive where you saved "MCU 10.1 MMA9550 Service Pack for Windows."
- 6. Select it and click Open. The file location will be displayed in the Add Site dialog.
- 7. Click OK.

5 Verification of the Installation

After completing the installation steps, we recommend customers verify the success of their installation by following these steps:

1. When prompted by the Workspace Launcher, browse to select or create a workspace directory and click OK.

Figure 14. Workspace Launcher dialog

2. From the main menu, choose File > New > Bareboard Project.

New	Alt+Shift+N	Section Project	
Open Path	Ctrl+Shift+A	Bareboard Project	C/C++
Open Tienn		F [©] Broject

For more information on how to create projects and program MMA955xL family devices, as well as evaluation software downloads, board support packages, videos, developer training and community forums, go to http://www.freescale.com/cwmcu10.

5.1 Commonly Asked Questions

Q1: What happens if I reinstall the service pack?

A1: The support files for this device under CodeWarrior directory will be overwritten. If your installation comes from the same service pack, the files will remain the same. Reinstalling the service pack will not corrupt your project files.

Q2: I have an error message saying "duplicated location" when I try to reinstall the service pack. What do I do?

A2: This is because the installation tool logs all software installations. If you started reinstalling the service pack accidentally, cancel the installation. If the previous installation was corrupted, the easiest solution is to install the service pack from another location.

Q3: Do I need to install the service pack every time I use it?

A3: No, the service pack installation is required only once per CodeWarrior development environment. If you reinstall CodeWarrior, you will need to reinstall the service pack.

Q4: If I get the error message "missing dependency" during installation and can't proceed, what do I do?

A4: Go back to section 4.1 step 3 for online installation, or section 4.2 step 8 for offline installation, and repeat the installation steps.
