### Network State Support (Ipsw8403)

Added support to the Control Bridge for the user to check the network details at any time.

## 5.4 Public v1007: Bug Fixes

### Control Bridge Attribute Report Wrong Field (Ipsw7032)

Report Individual Attribute no longer saves the status to the buffer.

### Complex Descriptor Request ID Incorrect (Ipsw7085)

Complex Descriptor Request ID was not consistent with the ID defined in the ZGWUI, and so would result in an (Unsupported Command). Fixed this issue by correcting the ID in the Control Bridge.

### ZigBee GUI does not decode Identify messages (Ipsw7220)

The message sent to indicate Start/Stop Identifying was not previously parsed in the ZGWUI.

### OTA progress bar still flashing like it is progressing even though complete (Ipsw7237)

Fixed an issue where the OTA progress bar would carry on flashing after the process was completed. Now the bar is cleared and it shows a 'complete' status to indicate the process has finished.

### User Descriptor Command ID Incorrect (Ipsw7684)

The ID for a User Descriptor command was not consistent across the Control Bridge and ZGWUI. This is now resolved.

### User Set Descriptor Command ID Incorrect (Ipsw7685)

The ID for a User Set Descriptor command was not consistent across the Control Bridge and ZGWUI. This is now resolved.

### Typo Errors for Remove Scene Command (Ipsw7711)

The ZGWUI would display both 'Remove Scene' and 'Remove All Scenes' as 'View Scene' responses. This has been fixed.

### Bulb cannot rejoin after factory reset (Ipsw8447)

If a bulb joined the Control Bridge, but was then factory reset, it would not be able to join again unless the Control Bridge was reset. This is now resolved.

## 5.5 Public v1007: Known Issues

None.

## 5.6 Public v1007: Serial Command Changes

### Move to Level with/without on/off

## 7.4 Public v1005: Bug Fixes

### ZGWUI Field Clearing Issue (Ipsw7713)

Previously, the ZGWUI would delete any text in a field upon mouse click. This was used to get rid of the flavour text describing what to input to that field. However, it would also delete user input data which could be frustrating for the user.

Now, once user data has been entered, fields are no longer cleared upon mouse click.

### Update All Tooltips (Ipsw7860)

Tooltips have now been added to all fields.

### Enabled SimpleDescResp, IdentifyClientServer and ResetToFactory Default Command (Ipsw7908)

Updated the following for Control Bridge Pre-Certification:

- Enable SimpleDescResp (make it discoverable)
- Enable Identify Server (update in zcl\_options.h)
- Enable handling of Basic Cluster command RTFD (update in zcl\_options.h for E\_CLD\_BASIC\_CMD\_RESET\_TO\_FACTORY\_DEFAULTS)
