

## MicroPak Logic portfolio

# Single, dual, or triple gate functions in small footprint leadless packages

NXP advances state-of-the-art packaging with MicroPak (XSON). Designed for use in portable applications, where board space is always an issue, XSON packages are dramatically smaller, allowing compact and slimmer overall designs. These leadless Mini Logic packages provide up to 65% space saving over traditional leaded Mini Logic (PicoGate) packages.

### KEY FEATURES

- Very small footprint
- 0.5 mm, 0.35 mm, and 0.3 mm pitch options
- Low profile height (0.5 mm or 0.35 mm)
- Pb-free, RoHS, and dark green compliant
- Fully specified (-40 to +125 °C)
- Automotive options

The MicroPak packages are leadless Mini Logic packages. They house the same silicon die as the larger leaded Mini Logic (PicoGate) packages. This ensures that along with the smaller footprint identical electrical performance is assured. Signal integrity may be improved due to lower package parasitic inductance. Their tiny size saves valuable board real estate. Packages are available with 0.5 mm as well as state of the art 0.35 mm and 0.30 mm pad pitch.

### BENEFITS

- Simplified board layout
- No bent leads
- No co-planarity issues
- Low power consumption

The package is an ideal choice for space constrained applications where PCB space and low cost assembly is critical. With their larger pads the MicroPak packages offer easier component placement as well as improved strength, reliability, and thermal characteristics over similar sized BGA solutions.

### APPLICATIONS

- Space constrained applications
- Consumer
- Portable
- Automotive

## MICROPAK PORTFOLIO

The MicroPak portfolio is very broad and includes analog switches, buffers/inverters/drivers, bus switches, counters, decoders, flip-flops, gates, multiplexers/demultiplexers, latches, level shifters, and Schmitt-trigger devices.
