
Errata for QN9090 QN9090T QN9030 QN9030T

This report applies to the product list of QN9090, QN9090T, QN9030 and QN9030T which have the following marking information of Line C: s * D *** 2

- s: diffusion center global foundry
- AP: assembly plant, X (ASEN manufacturing, Suzhou), S (NXP manufacturing Kaohsiung, Taiwan)
- D: RoHs Dark Green chemical content of molding
- ***: YWW, assembly data code in year and week
- 2: die version

Errata ID	Errata Title
SE300	JTAG: IDE loses communication with device
SE301	UART: Cannot detect error on second stop when 2 stop configuration is used

SE300: JTAG: IDE loses communication with device

Errata type: Errata

Description: MCUXpresso debug cannot be used for applications with the watchdog enabled.

During the debug session, the watchdog fires cause the IDE to lose connection, which prevents further debug in the session.

Workaround: Disable the watchdog during debug sessions.

SE301: UART: Cannot detect error on second stop when 2 stop configuration is used

Errata type: Errata

Description: When UART is configured to use 2 Stop bit protocol, the device does not detect error on second stop bit.

Workaround: No workaround is available. It is recommended not to use 2 stop bit protocol.

Information in this document is provided solely to enable system and software implementers to use NXP products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits based on the information in this document. NXP reserves the right to make changes without further notice to any products herein.

NXP makes no warranty, representation, or guarantee regarding the suitability of its products for any particular purpose, nor does NXP assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in NXP data sheets and/or specifications can and do vary in different applications, and actual performance may vary over time. All operating parameters, including "typicals," must be validated for each customer application by customer's technical experts. NXP does not convey any license under its patent rights nor the rights of others. NXP sells products pursuant to standard terms and conditions of sale, which can be found at the following address: nxp.com/SalesTermsandConditions.

While NXP has implemented advanced security features, all products may be subject to unidentified vulnerabilities. Customers are responsible for the design and operation of their applications and products to reduce the effect of these vulnerabilities on customer's applications and products, and NXP accepts no liability for any vulnerability that is discovered. Customers should implement appropriate design and operating safeguards to minimize the risks associated with their applications and products.
