**Overview**

Freescale Semiconductor’s HCS12 family of microcontrollers (MCUs) is the next generation of the highly successful 68HC12 architecture. Using Freescale’s industry-leading 0.25 µs Flash, the MC9S12DJ256 is part of a pin-compatible family that scales from 32 KB to 512 KB of Flash memory. The DJ256 provides an upward migration path from Freescale’s 68HC08, 68HC11 and 68HC12 architectures for applications that need larger memory, more peripherals and higher performance. Also, with the increasing number of CAN/J1850-based electronic control units (ECUs), its multiple network modules support this environment by enabling highly efficient communications between different network buses.

**Features**

**High-Performance 16-bit HCS12 CPU Core**

- 25 MHz bus operation at 5V for 40 ns minimum instruction cycle time
- Opcode compatible with the 68HC11 and 68HC12
- C-optimized architecture produces extremely compact code

**On-Chip Debug Interface**

- Dedicated serial debug interface
- On-chip breakpoints
- Real-time in-circuit emulation and debug without expensive and cumbersome box emulators
- Read/write memory and registers while running at full speed

**Network Modules**

- Two msCAN modules implementing the CAN 2.0 A/B protocol
  - Five receive buffers per module with FIFO storage scheme
  - Three transmit buffers per module with internal prioritization
- One J1850 module
  - Ability to link modules for higher buffer count
  - Programmable bit rate up to 1 Mbps
  - FIFO receive approach superior for event-driven networks
  - Ability to send and receive messages across an SAE J1850 serial communication network

**Integrated Third-Generation Flash Memory**

- In-application reprogrammable
- Self-timed, fast programming
  - Fast Flash page erase—20 ms (512 bytes)
  - Can program 16 bits in 20 µs while in burst mode
- 5V Flash program/erase/read
- Flash granularity—512 byte Flash erase/2 byte Flash program
- Four independently programmable Flash arrays
- Flexible block protection and security
- Flexibility to change code in the field
- Efficient end-of-line programming
- Total program time for 256 KB code is less than 10 seconds
- Reduces production programming cost through ultra-fast programming
- No external high voltage or charge pump required
- Virtual EEPROM implementation, Flash array usable for EE extension
- Can erase one array while executing code from another

**4 KB Integrated EEPROM**

- Flexible protection scheme for protection against accidental program or erase
- EEPROM can be programmed in 46 µs
- Can erase 4 bytes at a time and program 2 bytes at a time for calibration, security, personality and diagnostic information

**10-bit Analog-to-Digital Converter (ADC)**

- Two, 8-channel ADCs
- 7 µs, 10-bit single conversion time, scan mode available
- Fast, easy conversion from analog inputs like temperature, pressure and fluid levels to digital values for CPU processing
- Can effectively have 3.5 µs conversion time by sampling same signal with both ADCs
**Features**

<table>
<thead>
<tr>
<th>Features</th>
<th>Benefits</th>
</tr>
</thead>
</table>
| **Clock Generation Module with Phase-Lock Loop (PLL)** | > Clock monitor with self clock mode in case of no external clock  
> Programmable clock frequency with 1024 options ranging from divide by 16 to multiply by 64 from base oscillator  
> Real-time interrupt  
> Watchdog  
> Reliable, robust operation  
> Provides high performance using low-cost reference crystals  
> Reduces generated noise  
> Reduces power consumption  
> Easily able to implement real-time clock |
| **Enhanced Capture Timer** | > 8-channel, 16-bit with input capture, output compare and pulse accumulator  
> 16-bit modulus down counter  
> Flexible, programmable timer system |
| **8-bit or 16-bit Pulse-Width Modulation (PWM)** | > 8-channel, 8-bit or 4-channel, 16-bit PWM  
> PWM supports center-aligned operation  
> Efficiently implement motor control, battery charging or digital-to-analog (DAC) functions |
| **Two Serial Communications Interfaces** | > 8192 prescaler options  
> Asynchronous communication between the MCU and a terminal, computer or a network of MCUs  
> Exact baud rate matching |
| **Three Serial Peripheral Interfaces** | > Up to 6.25 Mbps  
> High-speed synchronous communication between multiple MCUs or between MCU and serial peripherals |
| **Inter-IC (I²C) Bus** | > 256 clock-rate options  
> Provides a simple, efficient method of data exchange between devices  
> Minimizes the need for large numbers of connections between devices and eliminates need for an address decoder |
| **Up to 91 Input/Output (I/O) Lines** | > Programmable pull-ups/pull-downs  
> Dual drive capability  
> Reduce system cost  
> Able to tailor application for minimum EMC or high current loads |

- AN2206: Security and Protection on the HCS12 Family
- AN2213: Using Cosmic Software's M68HC12 Compiler for MC9S12DP256 Software Development
- AN2216: MC9S12DP256 Software Development Using Metrowerks CodeWarrior™
- AN2250: Audio Reproduction on HCS12 Microcontrollers
- EB386: HCS12 D-Family Compatibility

**Cost-Effective Development Tools**

- **M68KIT912DP256**  
  $495*  
  Evaluation kit for development and evaluation of HCS12 application code that includes the M68EVB912DP256 and USBMULTILINKBDM

- **M68CYCLONEPRO**  
  $499*  
  HC08/HCS08/HCS12 stand-alone Flash programmer or in-circuit emulator, debugger, Flash programmer; USB, serial or Ethernet interface options

- **USBMULTILINKBDM**  
  $99*  
  Universal HC08/HCS12 in-circuit emulator, debugger, and Flash programmer; USB PC interface

- **CWX-H12-SE**  
  CodeWarrior™ Special Edition for Free*  
  HCS12 MCUs; includes integrated development environment (IDE), linker, debugger, unlimited assembler, Processor Expert™ auto-code generator, full-chip simulation and limited C compiler
