S32Z2 SAFE AND SECURE HIGH-PERFORMANCE REAL-TIME PROCESSORS

OVERVIEW
S32Z2 high-performance real-time processors safely integrate real-time applications with unparalleled gigahertz speed, multi-application integration and memory expansion capabilities to enable new consolidated and software-defined vehicles. The S32Z2 processors are ideal for safety processing and domain and zonal control.

The 16nm S32Z2 processors combine real-time and DSP/ML processing with hardware virtualization, scalable non-volatile memory, flexible expansion memory support and network acceleration. They are certified for compliance with ISO/SAE 21434 cybersecurity and ISO 26262 ASIL D functional safety. The S32Z2 processors are software-compatible with the S32E2 processors that support electric vehicle (xEV) control and smart actuation.

The S32Z2 processors are enabled with GreenVIP Vehicle Integration Platform software and the GreenBox 3 development platform, along with a strong partner ecosystem.

TARGET APPLICATIONS
• Real-time applications integration
• Software-defined vehicles (SDV)
• Domain controllers
• Zonal gateways
• Safety processing

ENABLEMENT
• GreenBox 3 development platform (S32E2-GRNBOX3)
• GreenVIP Vehicle Integration Platform reference software
• Support for AUTOSAR® OS, Zephyr® OS and FreeRTOS™ real-time operating systems
• Real-Time Drivers (RTD) including AUTOSAR MCAL support
• Inter-Platform Communication Framework (IPCF)
• S32 Design Studio IDE
  – GCC compiler, configuration tools (IVT, DCD, DDR, AUTOSAR), trace and debugger components, flash programmer
• Firmware for hardware accelerators (HSE, FlexLLCE)
• S32 Safety Software Framework (SAF)
• Automotive Math and Motor Control Library (AMMCLIB)
  – Support for Arm® Cortex®-R52 and DSP/ML processors
• AI/ML enablement (NXP eIQ® Auto)
SAFEASSURE FUNCTIONAL SAFETY PROGRAM

Functional safety. Simplified.

The S32Z2 processors are part of NXP’s SafeAssure functional safety program, which is designed to help system manufacturers more easily achieve system compliance with International Standards Organization (ISO) 26262 and International Electrotechnical Commission (IEC) 61508 functional safety standards. The program highlights our hardware and software solutions that are optimally designed to support functional safety implementations and come with a rich set of enablement collateral.

S32Z2 SAFE AND SECURE HIGH-PERFORMANCE REAL-TIME PROCESSORS

Key Features

<table>
<thead>
<tr>
<th>Benefit(s)</th>
<th>Up to gigahertz-class real-time processing</th>
<th>“Core-to-Pin” hardware virtualization</th>
<th>Up to 64 MB of flash memory</th>
<th>LPDDR interface for DRAM and flash expansion memory</th>
<th>Integrated DSP/ML processor</th>
<th>Advanced networking with integrated Time-Sensitive Networking (TSN) Gigabit Ethernet switch and flexible communications accelerator</th>
<th>Zipwire interprocessor communication interface</th>
<th>Optional complex timers support</th>
<th>Certified for ISO/SAE 21434 with Hardware Security Engine (HSE) and safe cryptography accelerators for LPDDR and CAN interfaces</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Up to gigahertz-class real-time processing</strong></td>
<td>Highest performance real-time processors beyond traditional microcontrollers (MCUs) to support more applications integration and more complex control applications</td>
<td>End-to-end, hardware isolation for diverse, multi-tenant real-time applications, providing freedom from interference, improved system resiliency for high availability and support for ASIL D functional safety applications</td>
<td>Scalable solution that can support larger applications and storage than traditional MCUs. Supports larger zero-downtime Over-the-Air (OTA) updates</td>
<td>Supports eXecute-in-Place (XiP) for large applications and ability to support AUTOSAR Adaptive Platform island for software-defined vehicles (SDV)</td>
<td>Accelerates advanced, predictive control algorithms using math/digital signal processing (DSP) and machine learning (ML)</td>
<td>Provides Ethernet networking for zonal architectures and multi-chip, real-time processing farms and efficient CAN data filtering and routing to provide data seamlessly to virtual ECUs</td>
<td>Supports remote actuation for coordinated processing</td>
<td>Supports advanced, time-critical control applications</td>
<td>Provides accelerated Public Key Infrastructure (PKI) support for secure boot and Over-the-Air (OTA) upgradability. Enhanced safety and security for memory and CAN interfaces</td>
</tr>
