Our solution supports 15 W power transfer with over 70 percent WCT-15WTXAUTO DC input to RX DC battery output power transfer efficiency.

This fully certified Qi hardware reference design includes a professional-grade Qi-certified software library and flexible application.

FEATURES
- MWCT1011A/13A wireless charging ICs
- Wireless Power Consortium (WPC) Qi Extended Power Profile (EPP) specification design
- NXP® low-power object detection technology or analog PING to detect a mobile device for charging while using the lowest possible standby power
- Dedicated design for automotive environment: supports free positioning with multiple coils, comparatively large Z-gap operation, comprehensive FOD, quick receiver removal detection, and fixed-frequency PWM control to reduce wide frequency spectrum EM emission
- NFC-enabled and CAN/LIN interface
- Automotive AEC-Q100 grade 2 certified
- NFC cards and ID protection
NXP SUPPORT
NXP provides all the necessary hardware documentation: schematics, layout and assembly files, as well as a complete BOM. We also provide a firmware example project with a certified library that contains all the necessary wireless charging control blocks. Users access the library via an API which lets them interact with parameters and settings contained in the firmware, providing maximum control to the users. Customers can use a ready-to-use binary file from NXP or build an application around the firmware library.

DEVELOPMENT TOOLS
Eclipse-based CodeWarrior® Development Studio for Microcontrollers
A complete integrated development environment (IDE) provides a highly visual and automated framework to accelerate the development of the most complex embedded applications.

Easy-to-use Wireless Charging GUI
The easy-to-use FreeMASTER GUI tool has configuration, calibration and debugging functions to provide a user-friendly design experience and reduce time-to-market.
