## 8 Known Issues and Limitations

The known issues about the hardware and hardware rework instructions are not included in this document. Read all hardware-related reference material and ensure the necessary hardware modifications have been made before using the software.

**Table 3. Known issues and limitations**

Issue description	Remarks
The Google USB driver must be installed multiple times for the MTP, PTP, MTP&ADB, PTP&ADB, and ADB function settings.	Some Windows XP environments may display MTP and PTP windows even with only PTP enabled in the device.
U-Boot will hang when erasing Kingston's SD card.	U-Boot will hang when sending the erasing command on some Kingston SD cards.
The display is sometimes black on both i.MX 8QuadMax MEK and i.MX 8QuadXPlus MEK boards.	<ul style="list-style-type: none"> <li>• The display is sometime black without any abnormal log or with the following log on both the i.MX 8QuadMax and i.MX 8QuadXPlus MEK board.</li> </ul> <pre>imx-dpu-crtc imx-dpu-crtc.4: flush - wait for content shld done timeout.</pre> <ul style="list-style-type: none"> <li>• It is caused by the hardware PMIC issue on both the i.MX 8QuadMax and i.MX 8QuadXPlus board.</li> <li>• The workaround is as follows: Disable selinux and switch to root user by <code>su</code>.</li> </ul> <pre>echo performance &gt; /sys/devices/system/cpu/cpufreq/policy4/scaling_governor.</pre>
The resolution of the screen recorded video is different from the one specified by the recording command, and the color of the video is different from the screen color.	Android platform needs RGBA format output, but the V4L2 framework does not support this format. To support RGBA format output in the mem2mem driver, the V4L2 format needs to be extended.
For i.MX 8QuadXPlus, it fails to boot from some types of eMMC.	In the default settings, the UUU script burns the boot image into eMMC Boot Partition with 32KB offset. Although it works properly on the MEK board, it fails to read the boot image on some types of eMMC.

**Table 3. Known issues and limitations**

Issue description	Remarks
	<p>There are two possible solutions:</p> <ul style="list-style-type: none"> <li>• Download flash.bin in the eMMC Boot Partition + 0KB offset + eMMC fastboot enabled in fuse.</li> <li>• Download flash.bin in the eMMC User Partition + 32KB offset (eMMC fastboot can be either enabled or disabled in fuse).</li> </ul> <p>For more information, see <a href="https://community.nxp.com/docs/DOC-342285">https://community.nxp.com/docs/DOC-342285</a>.</p>
