- Unless Otherwise Specified:
 - All resistors are in ohms, most are 1%, 1/10 Watt. Otherwise are 5%, 1/8 Watt.
 - All capacitors are in uF, some are 10% or 20%
 - All voltages are DC
 - All polarized capacitors are tantalum

2. Interrupted lines coded with the same letter or letter combinations are electrically connected.

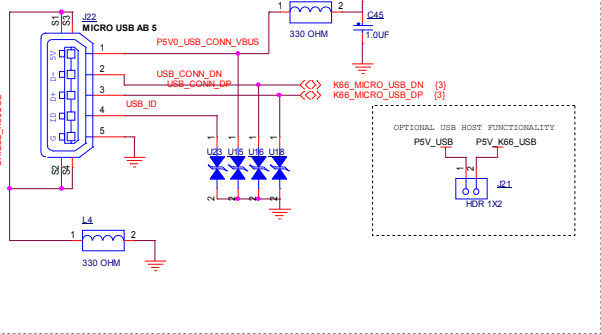

3. Device type number is for reference only. The number varies with the manufacturer.

4. Special signal usage:
 _B Denotes - Active-Low Signal
 <> or [] Denotes - Vectored Signals

5. Interpret diagram in accordance with American National Standards Institute specifications, current revision, with the exception of logic block symbology.

K66F USB CONNECTOR

(4.5,7) PTA0..17

(5) PTA25..29

(6,7) PTB0..11

(4,5,6) PTB16..23

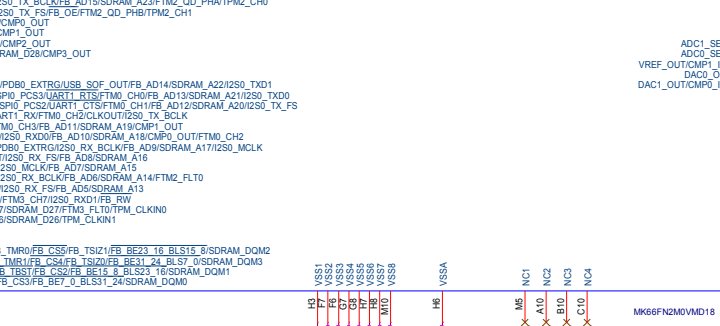

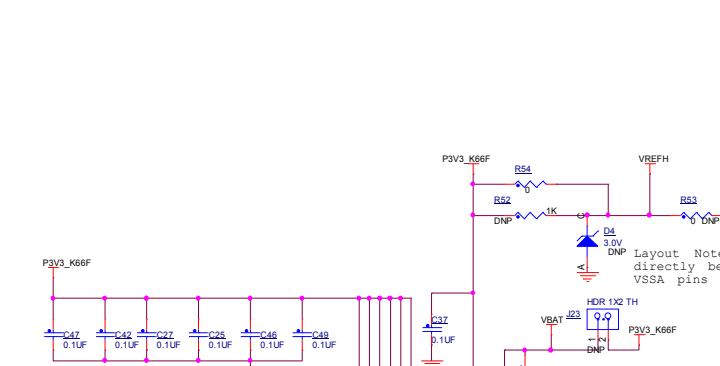

(5,6) PTC0..18

RGB LED FEATURE

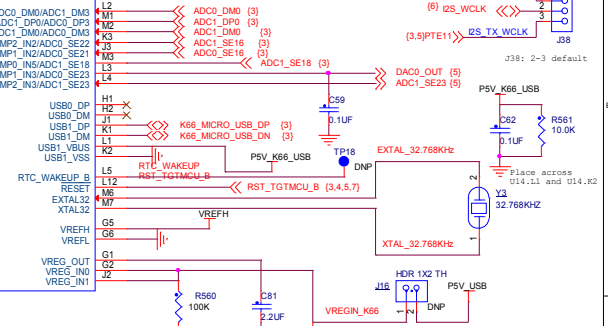

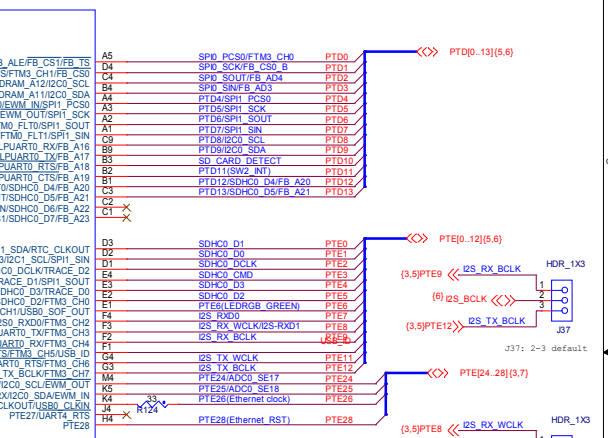

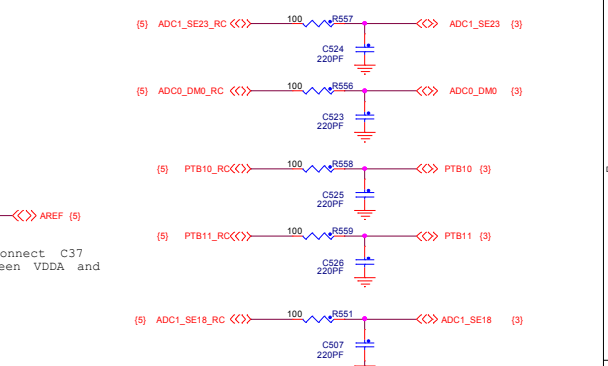

CLV1A-FKB-CJ1M1F1BB7R453

SWD CONNECTOR

HDR 2X5

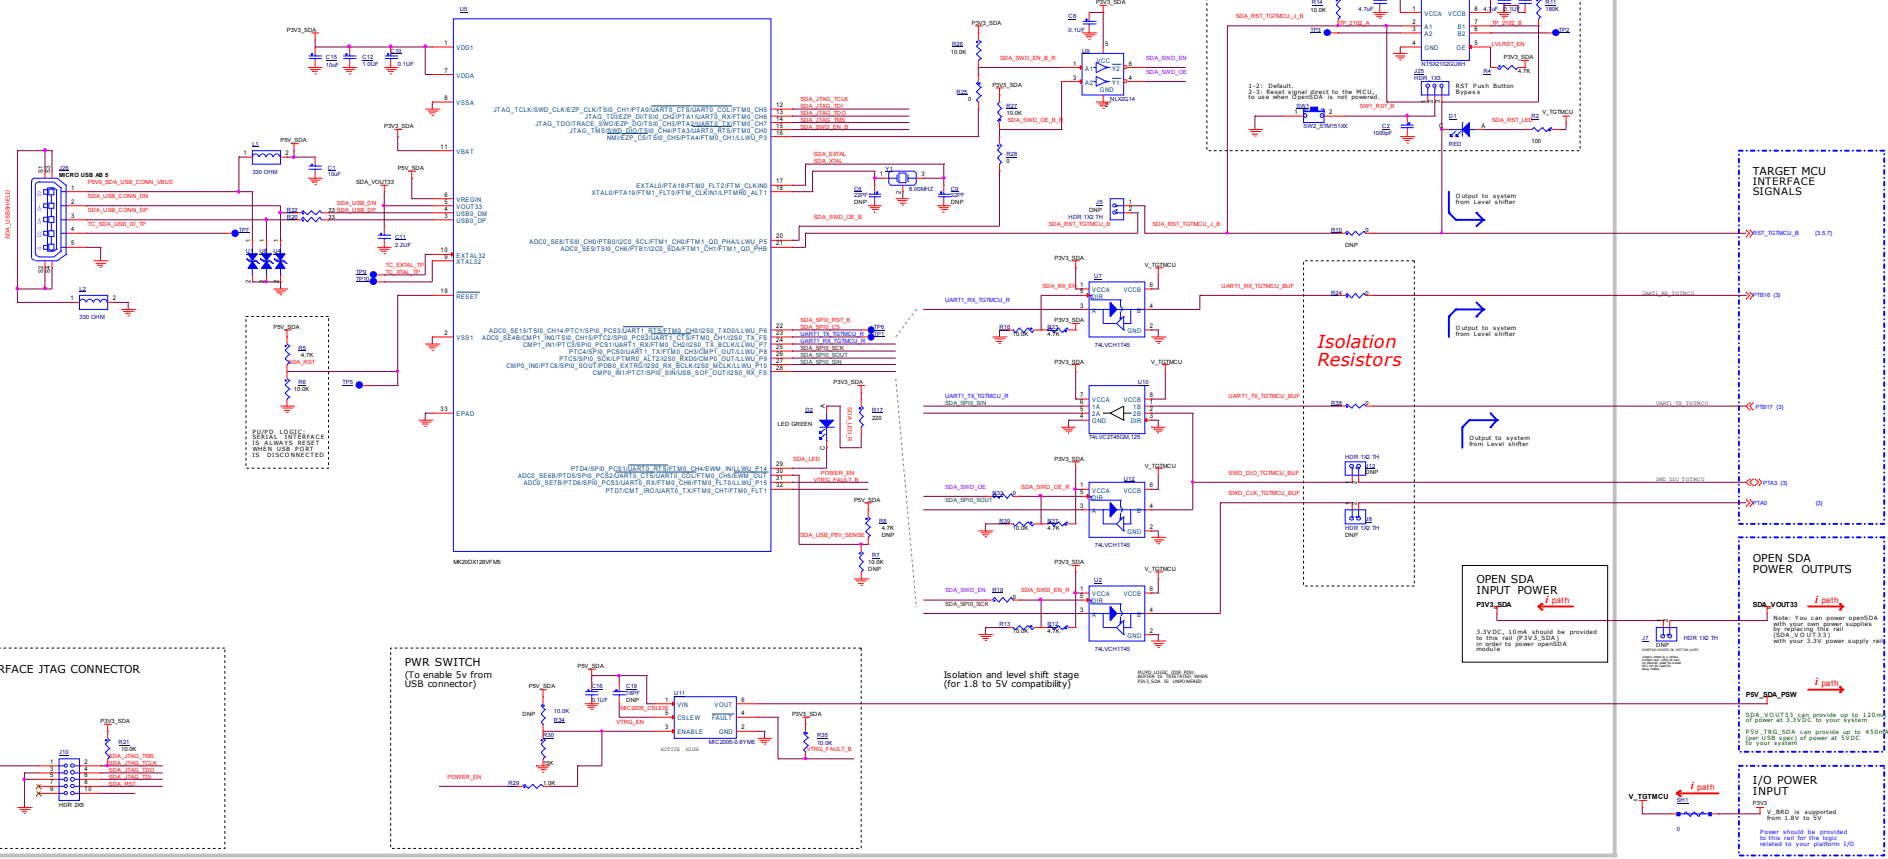

Place across U14..11 and U14..12

Place across U14..11 and U14..12

Product information block including Freescale logo, ICAP Classification (FCP, FIUO, PUBI-X), Drawing Title (FRDM-K66F), Page Title (K66F MCU), and a table with fields for Size, Document Number, Date, and Revision.

OpenSDA Interface

TARGET MCU INTERFACE SIGNALS

- SDA_RST_TOTMCU_B (5.5V)
- UART1_RX_TOTMCU_B (5V)
- UART1_TX_TOTMCU_B (5V)
- SWD_CLK_TOTMCU_B (5V)
- SWD_DIO_TOTMCU_B (5V)
- PSW_SDA_PSW (5V)
- I/O POWER INPUT (5V)

OPEN SDA INPUT POWER

3.3VDC, 10mA should be provided to this pin. An SP3234 SDA module is required to power OpenSDA.

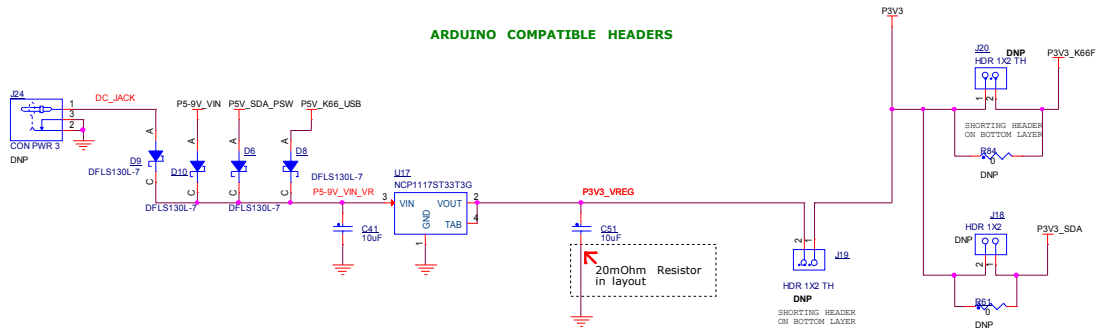

OPEN SDA POWER OUTPUTS

- SDA_VOUT33 (i path)
- PSW_SDA_PSW (i path)
- I/O POWER INPUT (i path)

Note: You can power OpenSDA with 3.3VDC power. However, a 3.3V 180mA SDA can provide up to 450mA (per USB spec) of power at 3.3VDC to your system.

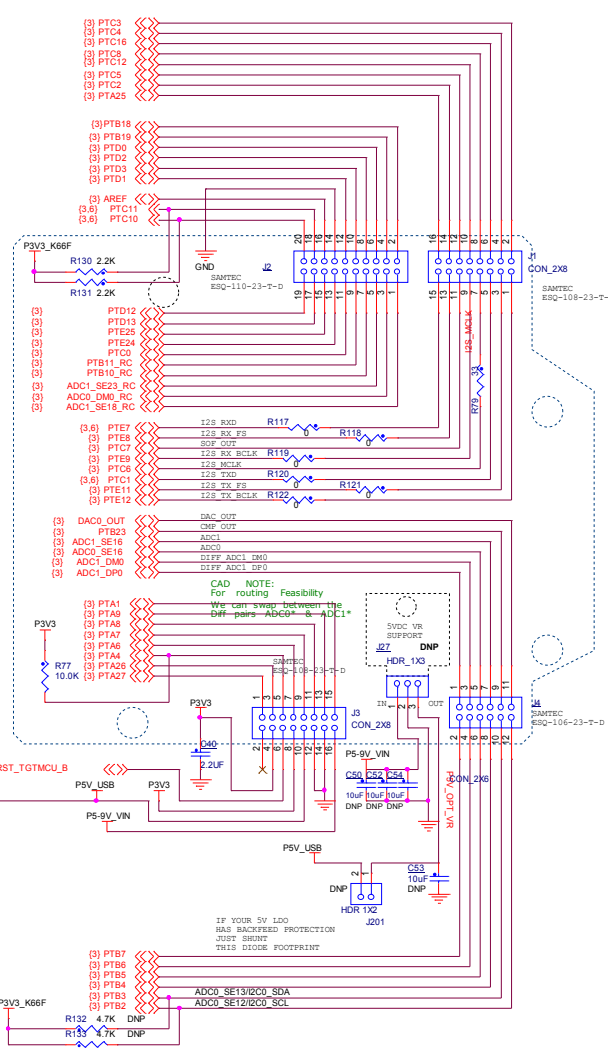

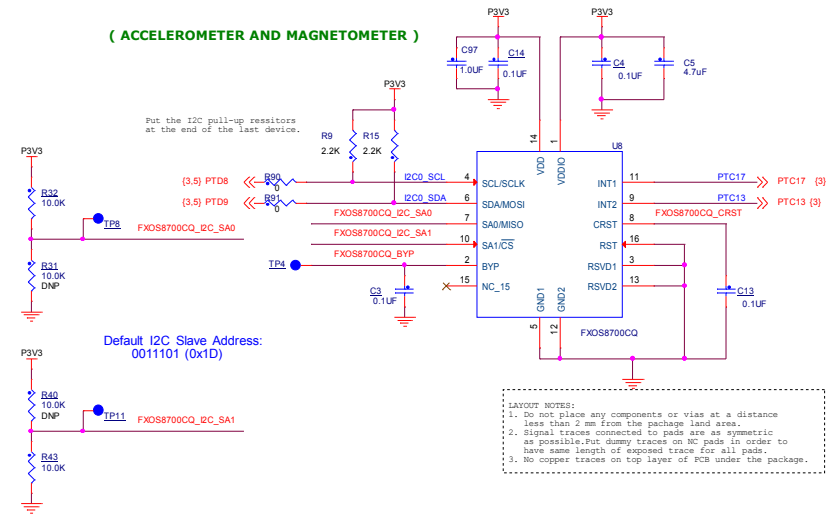

Note: V_BSD is supported from 1.8V to 5V. Power should be provided to this rail for the logic related to your platform I/O.

ARDUINO COMPATIBLE HEADERS

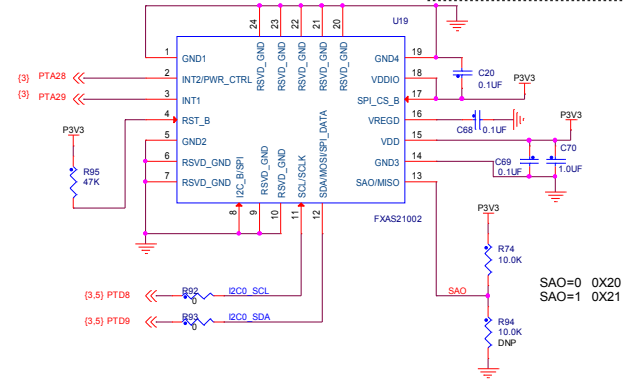

I2C INERTIAL SENSOR

(ACCELEROMETER AND MAGNETOMETER)

I2C INERTIAL SENSOR

LAYOUT NOTES:

1. The differential pair (TX+/- or RX+/-) should be routed away from all other signals and close together to use 5-mil trace width and 5-mil trace space in same length as possible with a 100ohm controlled trace.
2. Keep both traces of each differential pair on the same PCB layer. Avoid via and pad in the path.
3. Route each differential pair as identical to each other as possible.
4. Route both TX+/- and RX+/- pairs as far as away each other at least four times of 5-mil trace space.

CAD NOTE:
PLEASE ROUT TX/RX+ SIGNALS STRAIGHTFORWARD AND AVOID T-STUBS ON RESISTOR PAD INTERCONNECTION
