QorIQ P1011 and P1020 communications processors

Overview
Freescale QorIQ communications platforms are the next-generation evolution of our leading PowerQUICC communications processors. Built using high-performance Power Architecture® cores, QorIQ platforms enable a new era of networking innovation where the reliability, security and quality of service for every connection matters.

QorIQ P1011 and P1020 Communications Processors
The QorIQ P1 family, which includes the P1011 and P1020 communications processors, offers the value of smart integration and efficient power for a wide variety of applications in the networking, telecom, defense and industrial markets. Based on 45 nm technology for low power, the P1011 and P1020 processors provide both single- and dual-core options, from 533–800 MHz, along with advanced security and a rich set of interfaces.

QorIQ P1011 and P1020 Block Diagram
The P1011 and P1020 processors are ideally suited for multiservice gateways, Ethernet switch controllers, wireless LAN access points and high-performance general-purpose control processor applications with tight thermal constraints.

The P1011 and P1020 processors are pin-compatible with the QorIQ P2 platform products, offering a four-chip range of cost-effective solutions. Scaling from a single core at 533 MHz (P1011) to a dual core at 1.2 GHz per core (P2020), the combined QorIQ platforms offer an impressive 4.5x aggregate frequency range.

The P1011 and P1020 platforms are software compatible, and both feature the e500 Power Architecture core and peripherals, as well as being fully software compatible with the earlier PowerQUICC processors. This enables customers to create a product with multiple performance points from a single board design. The P1020 dual-core processor supports both symmetric and asymmetric processing, enabling customers to further optimize their design with the same applications running on each core or serialize their application using the cores for different processing tasks.
The P1011 and P1020 processors have an advanced set of features for ease of use. The 256 KB L2 cache offers incremental configuration to partition the cache between the two cores or to configure it as SRAM or stashing memory. The integrated security engine supports the cryptographic algorithms commonly used in IPsec, SSL, 3GPP and other networking and wireless security protocols. The memory controller offers future-proofing against memory technology migration with support for both DDR2 and DDR3. It also supports error correction codes, a baseline requirement for any high-reliability system.

The P1011 and P1020 processors integrate a rich set of interfaces, including a 4-lane multiprotocol SerDes, Gigabit Ethernet, PCI Express® and USB. The three 10/100/1000 Ethernet ports support advanced packet parsing, flow control and quality of service features, as well as IEEE® 1588 time-stamping—all ideal for managing the datapath traffic between the LAN and WAN interface. A TDM interface can support voice for legacy phone applications. Four SerDes lanes can be portioned across two PCI Express ports and two SGMII ports. The PCI Express ports can provide connectivity to IEEE 802.11n radio cards for wireless support. USB or SD/MMC interfaces can be used to support local storage. A second USB interface is also available to support USB-attached printers or as a console port. Multiple memory connection ports are available, including the 16-bit local bus, two USB 2.0 controllers, eSDHC and SPI.

### Technical Specifications

- **Dual (P1020) or single (P1011) high-performance Power Architecture e500 cores**
  - 36-bit physical addressing
  - Double-precision floating-point support
  - 32 KB L1 instruction cache and 32 KB L1 data cache for each core
  - 533–800 MHz core clock frequency
  - 256 KB L2 cache with ECC, also configurable as SRAM and stashing memory
  - Three 10/100/1000 Mb/s enhanced three-speed Ethernet controllers (eTSECs)
  - TCP/IP acceleration and classification capabilities
  - IEEE 1588 support
  - Lossless flow control
  - RGMII, SGMII
  - High-speed interfaces (not all available simultaneously)
  - Four SerDes to 3.125 GHz multiplexed across controllers
  - Two PCI Express controllers
  - Two SGMII interfaces
  - Two High-Speed USB controllers (USB 2.0)
  - Host and device support
  - Enhanced host controller interface (EHCI)
  - ULPI interface to PHY
  - Enhanced secure digital host controller (eSDHC)
  - Serial peripheral interface
  - Integrated security engine (SEC 3.3)
  - Crypto algorithm support includes 3DES, AES, RSA/ECC, MD5/SHA, ARC4, Snow 3G and FIPS deterministic RNG
  - Single pass encryption/message authentication for common security protocols (e.g., IPsec, SSL, SRTP, WiMAX)
  - XOR acceleration
  - 32-bit DDR2/DDR3 SDRAM memory controller with ECC support
  - Programmable interrupt controller (PIC) compliant with OpenPIC standard
  - Four-channel DMA controller
  - Two I2C controllers, DUART, timers
  - Enhanced local bus controller (eLBC)
  - 16 general-purpose I/O signals
  - Package: 689-pin wirebond power-BGA (TEPBGA2)
